

ARC-11RC Rib Cutting System

Turnkey Solutions Built Right

The automatic rib wire cutting machine measures and cuts rib wires to be used for making screens. The cutting machine uses a spool table with brake to allow the wire to spin off freely. The machine utilizes a wire pull motor to assist the wire into the rollers. An encoder wheel measures the wire while coming off of the spool. A pneumatic shear cuts the wire at the programmed length. The wires then fall into a tray for the cut wire to rest in. A small control box is used to program cutting length and quantity.

Features

- Control Box with Digital Read Out
- Steel Frame
- Spool with Brake
- Wire Pull Motor/Wheels
- Wire Straightener
- Encoder Wheel
- Pneumatic Scissor Cutter
- Tray for Cut Wire
